

A Summer of Science Internship

The Summer Internship Program at the Novartis Institutes for BioMedical Research (NIBR) provides research training opportunities for talented college students who have a strong desire to pursue a career in the biomedical field and gain exposure to industry. Interns are carefully matched with NIBR scientist mentors to gain first-hand exposure to NIBR's innovative approaches to research, science and technology.

Program Highlights

Interns conduct an independent research project under the guidance of a NIBR scientist. This 10-week paid internship runs from June to August at our research headquarters in Cambridge, Massachusetts. Interns will participate in scientific, personal, and professional development events such as poster sessions, seminars and workshops. Social events will take place at various times during the internship.

NIBR is committed to providing inclusive research experiences and encourages applications from talented individuals, including students from under-resourced communities who are interested in biomedical careers. Prior research experience is not required and we welcome applicants for whom this would be their first internship.

Eligibility

- Applicants must have completed at least three semesters or four quarters at an accredited U.S. college or university before the start of the internship
- Applicants must attend a school in a U.S. state or territory and be eligible to work in the United States
- Applicants must have a strong desire to pursue a career in a biomedical field
- Applicants should have a GPA of at least 3.3 on a 4.0 scale, however, this comprises only one element of the application, which is reviewed in its totality
