

Dare to Beam

[Click here to join the Beam Team](#)

Daring is confidence, passion, commitment and the people willing to rise to the challenge of advancing science and changing lives. As a member of the Beam Team, you'll get to test new ideas in an environment that encourages creativity.

Breaking New Ground

While being rigorous and honest in our research, we're pushing the boundaries of innovative science and technology to help modify and cure a wide range of diseases affecting patients and their families.

Powered by Difference

Great science demands a great team. We're committed to each other and united by diversity of thought. Our leaders believe that the best work happens when we encourage individuals to bring their unique perspectives to the table and welcome them with open minds.

Embracing Risk

You'll get to test new ideas in an environment that encourages creativity. We are always open to taking risks, because innovation only happens when people are free to fail.

Fiercely Determined

Each of us is driven by our vision to become the leader in precision genetic medicine through discovering, developing, and ultimately commercializing our own medicines to help patients.

We are the Beam Team

Our vision is to provide life-long cures to patients suffering from serious diseases.

Our Co-op & Intern Programs

Join us for a co-op or intern experience that will allow you to work on challenging, mission critical projects, network with leaders across the company, and engage in professional development opportunities.

Program Cycles:

- Interns: 12-week assignment (June-August)
- Co-ops: 6-month assignment (January-June & July-December)

Functional Areas Include:

- Process Development - CAR-T & Hematology
- Computational Sciences
- Gene Editing Technologies
- Technical Operations
- Hematology
- Protein Sciences
- Finance
- Analytical Development
- Ophthalmology
