

Youth Neurology Education & Research Program

Are you a high school or undergraduate student interested in learning more about Neurology during a paid summer internship?

OUR MISSION

We aim to **inspire** by offering exposure to leading neurologists and neuroscientists from diverse backgrounds, **equip** through paid opportunities to engage in mentored educational and research activities, and **empower** with structured support to translate contributions into publications, presentations, and awards that facilitate the academic advancement of participating youth.

PROGRAM DETAILS

We engage youth in Massachusetts from communities underrepresented in neurology, and provide paid, mentored research and educational opportunities.

Mentored Research

Student pairs will be assigned to a lab under the mentorship of an MGH Neurology faculty member. Under supervision, all interns work on current, ongoing research projects.

Weekly Didactics

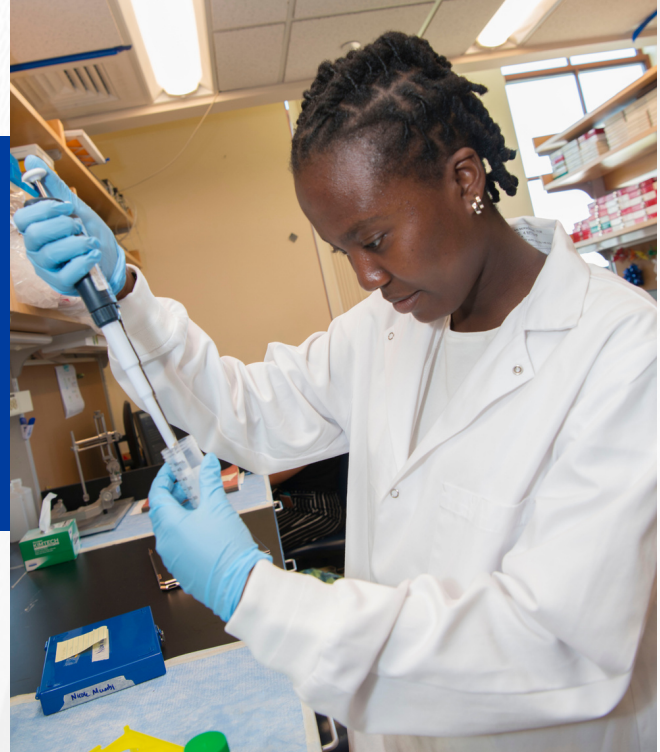

Students will engage in three weekly didactic sessions led by leading neurologists, neuroscientists, and other professionals, with the goals of building interns' knowledge of neurology while exposing them to an inspiring diverse group of leaders in the field.

Longitudinal Support

All interns receive longitudinal support after program completion in the form of career advising, networking, application support, professional funding, resume building, and anything else the student may need support with.

ELIGIBILITY

- High school students eligible: High school seniors in Fall 2024, recent high school graduates, or rising college freshman are eligible.
- Undergraduate students eligible: Current undergraduate students or recent college graduates are eligible.
- Be living or studying in Massachusetts at the time of the internship.
- Be able to commit to working full-time (40 hours per week), in-person, in the Boston area for the duration of the program.
